THE PLUG

ANTIGRAVITY BUILD PROMPT

Full-Stack Specification · Bulawayo Community Marketplace · PWA

Platform	Market	Age Gate
Progressive Web App (PWA)	**Bulawayo, Zimbabwe**	**16+ (DOB verified)**

HOW TO USE THIS DOCUMENT

Instructions for Antigravity / your build partner

This document is a complete, structured build specification derived from the brainstorm session between the founder and AppArchitect AI. Attach it alongside the HTML prototype file (the-plug.html) when briefing your developer or AI builder.

Follow this order:

→ Read Section 1 (Product Identity) to understand the vision and tone.
→ Study Section 2 (Ubuntu Economy) carefully — it is the entire trust engine of the app.
→ Use Section 3 (Screen Map) as the UI/UX spec for every page.
→ Reference Section 4 (Logic Rules) when writing backend functions.
→ Use Section 5 (The Plug Code / User Agreement) verbatim in onboarding.
→ Section 6 (Admin Dashboard) is the owner-only view — build it behind a protected route.
→ Validate every feature against Section 7 (Edge Cases) before marking complete.

⚡ SECTION 1 — PRODUCT IDENTITY

Vision, personas, and core proposition

App Name & Tagline

App Name	THE PLUG
Tagline	Your Community Connection for Every Need.
Platform	Progressive Web App (PWA) — mobile-first, no App Store needed
Launch City	Bulawayo, Zimbabwe (text-based suburb system — no Google Maps API)
Languages	English / IsiNdebele / ChiShona — toggle available on every screen
Min Age	16 years (DOB verified at onboarding; under-16 denied)

User Personas

Primary — The Urban Hustler (e.g., Malik, 24)

Tech-savvy. Sells unused tech, picks up quick local gigs (mowing, deliveries, moving boxes). Cares about speed, low prices, and building Ubuntu reputation to unlock more neighborhoods.

Secondary — The Bargain Seeker (e.g., Mrs. Dlamini, 55)

Needs affordable household goods (e.g., a second-hand wheelchair, a TV, clothes). Trusts the Ubuntu Points score to decide whether to meet a stranger for an exchange.

Two Transaction Types — How They Coexist

Attribute	ITEM AUCTION	BLIND GIG
Starting Point	$1 auto-set by system	No price — 100% blind until first bid
Who bids	Buyers bid upward	Providers state their price to do the work
Duration	24h / 48h / 72h (poster's choice)	24h / 48h / 72h + optional 'Required By' date
Payment	P2P — cash or private digital transfer at meetup	P2P — cash or private digital transfer on job done
Safety tag	N/A	Poster ticks '16+ Friendly' — if unticked, job is treated as High Risk and hidden from under-18 feeds

SECTION 2 — THE UBUNTU ECONOMY

The trust engine — every rule, every threshold, every edge case

Core Ubuntu Rules

→ Every new account starts at 100 Ubuntu Points.
→ The meter is INFINITE — there is no ceiling.
→ Successful deal (both parties): +5 points each.
→ Failed deal / no-show / non-payment: -5 points to the at-fault party.
→ Verified scam: -20 points + immediate account freeze.
→ 5 consecutive successes: bonus +10 points ('Master Plug' status achieved).
→ Inactivity: -5 points per month after a 90-day grace period.

Tier Thresholds & Restrictions / Advantages

Points	Status	Restrictions	Advantages
0	Blacklisted	Device ID + phone number permanently banned	None
1–50	Risky — Account frozen/under review	Cannot bid or post; profile shows 'Under Review'	None
51–89	Proving	Can only bid on 1 job at a time; cannot bid on items over $50	Home suburb only
90–99	Low — Warning	Daily post limit applied; system alert: 'One more fail = restriction'	Home suburb only
100 (Start)	Neutral / New Plug	None	Home suburb; can gift points; 'Seedling' badge
150+	Trusted / Silver Plug	None	+2 suburb unlocks per 50 pts; priority listing
300+	Elite / Community Mod	Must pass 3 mock disputes before Mod activation	Mod Jury access; 'Community Warden' badge; +1 per 10 correct verdicts

Neighborhood Expansion Logic

→ At onboarding: user selects one Home Base suburb (permanent anchor).
→ Every 50 points gained above 100: user may select +2 new Bulawayo suburbs.
→ If points drop by 50 below a milestone: 48-HOUR GRACE PERIOD begins. UI shows amber flicker + countdown on those suburbs.
→ If not recovered in 48h: those suburbs are revoked. Same suburbs are restored (not re-chosen) when points recover — this preserves trust continuity in those communities.

→ Changing Home Base allowed once every 6 months (anti-gaming cooldown).

→ No Google Maps API needed — use a hierarchical text list: City > Zone (N/S/E/W/Central) > Suburb.

The Jan 30th 'Big Plug' Bonus — HIDDEN FEATURE

> **IMPORTANT: This feature must not be mentioned anywhere in the UI until Jan 30th.**
>
> Backend tracks a 'Gifted Total' counter per user silently.
>
> On Jan 30 at 00:00, a script runs. If Gifted_Total >= 50 points given to others: award +100 Ubuntu Points.
>
> Also unlock the 'Golden Eye': ability to see a total 'generosity score' on other users' profiles.
>
> Only users who earned this award can see the Golden Eye data on profiles.
>
> The Gift Points button only appears on the Handshake Success screen after a completed deal — never on a random profile — to prevent point farming.
>
> Only users with > 100 points may gift. Cap: 2 points per transfer.
>
> During onboarding, show: 'The community thrives when you give. Good things happen to those who share.' — no further hint.

SECTION 3 — SCREEN MAP

Every screen, its purpose, key elements, and exit points

1. Splash Screen

→ Purpose: Brand identity + app load.
→ Key Elements: THE PLUG logo, tagline 'Your Community Connection for Every Need.'
→ Exit: Auto-advances to Language Select.

2. Language Select

→ 3 buttons: English / IsiNdebele / ChiShona.
→ Selection stored in user preferences; toggle icon always visible top-right on all screens.
→ Exit: Advances to Onboarding slides.

3. Onboarding Carousel (3 Slides)

→ Slide 1: 'Bid on Anything' — $1 starts, 24/48/72h windows.
→ Slide 2: 'Earn on Gigs' — post or bid on jobs; P2P pricing.
→ Slide 3: 'Build Your Ubuntu' — points, neighborhoods, trust. Hint at Jan 30 reward without spoiling it.
→ Actions: Swipe, Skip, or Get Started.

4. Sign Up / Log In

→ Fields: Full Name, Phone Number, Date of Birth, Password.
→ Social login: Google, Facebook.
→ Phone + Device ID verification: MANDATORY (prevents 0-point users creating alt accounts).
→ Under-16 DOB: deny registration with explanation.
→ Edge cases: phone already in use, invalid OTP.

5. Neighborhood Selection (Onboarding Step)

→ Screen: 'Where is your Home Base?'
→ UI: Text list of Bulawayo suburbs grouped by zone (North, South, East, West, Central).
→ This suburb is permanent (locked until Home Base migration feature, max once per 6 months).
→ Only this suburb is visible/searchable until user reaches 150 points.

6. The Plug Code (User Agreement — Mandatory)

→ Triggered after phone verification. Must scroll through all 5 commandments to unlock 'I Accept'.

→ Ends with a 1-question knowledge check in the user's chosen language.

→ User must answer correctly before proceeding. Wrong answer = try again.

→ Digital signature: I Accept button logs device ID + timestamp.

→ See Section 5 of this document for the full Plug Code text.

7. Home Dashboard

→ Top toggle: [ALL] [ITEMS] [GIGS]

→ Search bar: keyword search within user's unlocked suburbs.

→ Urgency Rail: Horizontal scroll of listings/gigs ending in < 2 hours.

→ Unified Feed: Item Cards (photo, title, current bid, time left, seller Ubuntu score) and Job Cards (icon, title, bid count, distance in suburb, poster Ubuntu score — NO PRICE shown).

→ FAB: Large '+' button labeled 'PLUG SOMETHING' — opens Create Listing.

→ Local Plug Radio: Text ticker — e.g., 'Huge auction in Hillside ending in 10 mins!'

8. Create Listing

→ Toggle: 'Selling an Item' vs 'Posting a Job'.

→ Fields: Photos (up to 3, compressed <200kb), Title, Description, Category, Suburb (from unlocked list).

→ Item only: 24/48/72h duration selector. Auto-starts at $1.

→ Job only: Required By date. '16+ Friendly' checkbox.

→ Exit: To the live auction/gig detail view of their own post.

9. Item / Gig Detail Screen

→ Item: Live countdown timer (pulses red in last 60 mins), current highest bid, seller Ubuntu score, Place Bid button, list of current bids.

→ Gig: Bids coming in from providers (price + bidder name + Ubuntu score). Seeker can tap Accept on any bid at any time. Countdown shows time left.

→ 'Report This Listing' button: opens category picker (Stolen / Drugs / Inappropriate / Scam).

→ If 3 reports within 1 hour: listing is auto-shadow-banned until Admin/Mod review.

→ Keyword Auto-Reject: listings containing banned words (drugs, adult content) are blocked at post time.

10. Deal Memo Pop-up (Post-Accept)

→ Both parties must tap 'I Agree' to: 'I commit to paying/performing as agreed. Failing to do so will result in a -5 Ubuntu deduction and potential blacklisting.'

→ Exit: In-app chat opens.

11. In-App Chat

→ Opens automatically after both parties accept the Deal Memo.
→ Private channel — no phone numbers shared initially.
→ Suggests public Safe Zone meetup spots in Bulawayo.
→ Quick-reply templates: 'I'm here', 'Delayed 10 mins', 'Money sent'.
→ 'Report Extortion' button: flags conversation to human moderator immediately.
→ Chat logs archived during any active dispute.

12. My Plugs (Control Center) — Dual-Tab

→ Tab 1 — MY REQUESTS: Items I'm bidding on (live countdowns, outbid alerts); Jobs I posted (blind bids received, accept button).
→ Tab 2 — MY HUSTLE: Items I'm selling (manage auctions); Jobs I'm bidding for (status of offers).
→ Accepted deals enter 'Handshake State': visible only to the two parties — removed from public feed.
→ Handshake Timer: 48h after acceptance. If Swap Code not entered, app pings both parties.
→ Offline Swap Code displayed here — 4-digit code visible only to the Seeker.

13. Handshake Success Screen

→ Entry: Provider enters correct 4-digit Swap Code.
→ Animation: Ubuntu Handshake graphic + '+5 Ubuntu Points' celebration.
→ Shows Neighborhood Progress bar (e.g., '45 pts to next suburb unlock').
→ Gift Points button appears: 'Gift 1 Point to [User]?' — only if user has > 100 pts.
→ Safety prompt: 'Screenshot this screen — records deleted in 30 days for your privacy.'

14. User Profile

→ Ubuntu Meter: infinite counter with milestone badges (Bronze 100, Silver 150, Gold 200, Mod 300, Legend 1000+).
→ Generosity Tracker (public): 'Points awarded to others this year' — visible to all. Golden Eye users see this figure with a gold glow.
→ Trust Badges: Fast Responder, Verified Identity, 5-Star Service, Community Mod.
→ Stats Grid: Total Deals Done, Jobs Completed, Items Sold.
→ Neighborhood Chips: Home Base (locked), Unlocked suburbs (green), Locked suburbs (grey with lock icon).
→ Reviews Feed: Public comments from past Handshakes.
→ 'Report User' button: always visible when viewing someone else's profile.
→ Edge case — 0 points: 'Blacklisted' watermark across profile.
→ Edge case — active dispute: 'Under Review' amber banner.

15. Search & Filter

→ Keyword bar (translated per language setting).

→ Neighborhood checklist: Home Base + Unlocked suburbs (checked by default); Locked suburbs greyed out with 'Need X pts to unlock'.

→ Hustle Toggle: [Buying Items] / [Finding Work].

→ 16+ Friendly toggle: force-locked ON for users under 18; optional for adults.

→ Ubuntu Filter slider: 'Show only sellers/providers with 150+ pts'.

→ Golden Eye Filter: only visible to Jan 30 award winners — 'Most Generous Plugs'.

→ Saved Search / Hustle Alert: user saves a search and gets a push notification when a matching listing goes live.

⚙ SECTION 4 — BACKEND LOGIC RULES

Functions, automation, and data rules for the developer

The Offline Swap Code (Handshake)

→ Generated when Seeker taps 'Accept Bid'. 4-digit unique code shown ONLY to the Seeker.
→ Provider writes it down offline or remembers it.
→ Provider enters code in the app when back on Wi-Fi. System matches codes.
→ 3 incorrect attempts = automatic Dispute Trigger.
→ States: Empty → Pending → Success → Error.

Post-Deal Privacy (Listing Archive)

→ Once a bid is accepted: listing immediately disappears from ALL public feeds and search results.
→ It moves to a private 'Handshake State' — visible ONLY in My Plugs for the two involved parties.
→ This prevents gazumping and keeps the live feed clean.

Storage Management (Cost-Efficient)

→ All uploaded photos: auto-compressed to < 200kb on upload.
→ Undisputed deals: all associated images purged from server 30 days after Handshake Success.
→ Active disputes: images kept indefinitely until dispute is resolved.
→ 7-Day Dispute Window: hard cutoff. The 'Dispute' button disappears from a transaction on Day 8. After Day 8, the deal is 'Ubuntu-Certified'. On Day 30, photos are purged.
→ User backup reminder: pop-up at Handshake — 'Screenshot this for your personal records.'

Inactivity Decay

→ 90-day grace period of inactivity: no penalty.
→ After 90 days: -5 Ubuntu points per month of continued inactivity.
→ System warning at Day 80: 'Your points will start decaying in 10 days. Complete a deal to stay active.'

The Ubuntu Handshake Logic Table

Scenario	Seeker Action	Provider Action	Outcome
Smooth Deal	Marks 'Good'	Marks 'Good'	Both +5 pts
No-Show (Provider)	Marks 'Did Not Show'	—	Provider -5, Seeker 0
Non-Payment (Seeker)	—	Marks 'Did Not Pay'	Seeker -5, Provider 0

Conflict	Hits 'Dispute'	Hits 'Dispute'	Freeze both — Mod/Jury decides
Stolen Item Reported	Reports to police + app	—	Seeker's -5 reversed; seller blacklisted

Content Moderation Rules

→ Keyword Auto-Reject: system blocks any post containing a banned word list (drug names, adult content keywords). Admin can add/remove words from this list without a code update.

→ 3-Reports in 1 Hour: listing auto-shadow-banned until Mod/Admin review.

→ 'Stolen Property' alert: if a search keyword matches a recently reported stolen item, show 'Caution' banner.

→ Auto-Shadowban: account restricted from bidding/posting whenever a dispute is active against them.

→ Blacklist Registry: stores Device ID + Phone Number of 0-point users to block alt account creation.

SECTION 5 — THE PLUG CODE (USER AGREEMENT)

Paste this verbatim into the onboarding screen

The following text must be displayed in the user's chosen language. The user must scroll through all 5 commandments before the 'I Accept' button activates. A 1-question quiz follows.

COMMANDMENT 1 — Your Word is Your Bond

Accepting a bid is a contract. No-shows and ghosting result in -5 Ubuntu Points.
Two consecutive failed deals earns a permanent 'Warning' badge on your profile.

COMMANDMENT 2 — Start Small, Grow Big

You start in your home suburb with 100 Ubuntu Points.
Every 50 points earned unlocks 2 more Bulawayo neighborhoods.
If you lose 50 points, you lose those extra suburbs (48-hour grace period before the lock kicks in).

COMMANDMENT 3 — Safety First. Always.

Always meet in public, well-lit places for exchanges.
If you are under 18, only apply for jobs marked '16+ Friendly'.
The app suggests Safe Zone meetup spots in Bulawayo.

COMMANDMENT 4 — The 7-Day Rule

You have exactly 7 days after a completed deal to raise a dispute.
After Day 7, the deal is permanently 'Ubuntu-Certified' and cannot be contested.
Screenshot your deal completion screen — the app deletes photos after 30 days.

COMMANDMENT 5 — Respect the Ubuntu

Gifting points to others builds the community. Scamming destroys it — and gets you permanently banned.
Listing stolen goods or prohibited items results in an instant blacklist.
The community thrives when you give. Generosity is rewarded in secret.

Knowledge Check Quiz

After the scroll, display this question in the user's language. They must answer correctly before proceeding:

Question: What happens if you accept a job and then don't show up?

A) Nothing happens
B) -5 Ubuntu Points are deducted from your score ← CORRECT ANSWER
C) Your account is deleted immediately

SECTION 6 — ADMIN DASHBOARD (OWNER VIEW)

Protected route — Commander View for the platform owner

The Bulawayo Pulse (Overview)

→ Live count: Active $1 Auctions / Active Gigs.

→ Ubuntu Economy: Average points per user; total points gifted this month.

→ Growth panel: New users per neighborhood per week.

→ Storage Monitor: How much space Handshake photos are taking vs 30-day purge schedule.

The Red Flag Queue

→ All listings flagged as Stolen / Drugs / Inappropriate jump to the top.

→ One-tap Takedown: deletes listing + sends -10 Ubuntu Penalty to poster.

→ Nuclear Ban button: blacklists Device ID + phone number immediately.

→ 'Stolen Property' Search: check if a serial number from a flagged item matches past listings.

Dispute Command Center

→ Queue: All disputes not yet settled by Community Jury.

→ Jury Monitor: View the 3 Jury members' current votes. If split (Hung Jury), 'Admin Final Call' button appears.

→ Evidence Viewer: Compressed photos + full chat log timeline (shows when deal was made, when code was entered, what was uploaded).

→ If 30-day purge has run: screen shows 'Evidence Purged — User Backup Required'.

Neighborhood & User Management

→ Blacklist: View all 0-point users + blocked Device IDs.

→ Suburb Stats: see which neighborhoods are 'hot' vs 'dead' — informs marketing.

→ Neighborhood freeze: ability to freeze an entire suburb from new listings if high-risk reports spike.

→ Point Manual Override: manually add/remove points in case of technical bugs.

→ Add/rename suburbs without a code update.

The Big Plug Scheduler (Jan 30th)

→ Hidden counter: list of users who have hit 50+ gifted points threshold.

→ Button locked until Jan 30th. On that date: one-tap to 'Release the Ubuntu' — awards +100 pts + Golden Eye to qualifying users.

→ Community-wide celebration badge auto-applied to winners' profiles.

Community Mod Jury (300+ pts) — Admin Oversight

→ Case File: split-screen — Seeker statement vs Provider statement.

→ Evidence Carousel: swipeable uploaded photos.

→ Chat Log Access: full conversation from bid acceptance onward.

→ Anonymity: Jury sees Ubuntu scores and suburbs only — no real names.

→ Verdicts: Favor Seeker / Favor Provider / Mutual Fault / Escalate to Admin.

→ Consensus: 2 of 3 Jury votes triggers automatic point update.

→ Hung Jury: escalates to Admin for Final Ruling.

→ Bias Filter: a Mod cannot vote on disputes involving their own Home Base neighborhood.

→ Mod Strike System: if Admin reverses a Jury decision, all 3 Mods get a Strike. Too many strikes = loss of Mod status.

→ Jury Accuracy Score: Mods who consistently vote against the majority lose Mod status permanently.

SECTION 7 — EDGE CASES & ARCHITECTURAL SOLUTIONS

Handle these before marking the build complete

Anti-Gaming Edge Cases

→ Ghost Completion: if no dispute is filed within 24h of the job's Required By time, app auto-awards +5 to Provider.

→ Point Extortion: 'Report Extortion' button in chat flags conversation to a human moderator immediately — no point movement until review.

→ Low Point Loop (alt accounts): Phone + Device ID verification blocks banned users from creating new accounts.

→ Point Trading for Jan 30: Gift Points button only appears on Handshake Success screen — never on a random profile. This prevents artificial farming.

→ Community Mod Power Trip: biased Mods don't just lose 5 pts — they are instantly stripped of Mod status and reset to 100 pts.

→ 300-Point Mod Trial: user must pass 3 mock disputes (test cases) before gaining full Mod powers.

Data & Connectivity Edge Cases

→ No-Data Handshake: Swap Code is the offline verification method. Provider writes down the 4-digit code; enters it when back on Wi-Fi.

→ Offline Map: 'My Neighborhoods' list should be cached offline so users can reference suburb names and Safe Zone addresses without a signal.

→ Offline Deal Memo: the accepted Deal Memo and address should be viewable offline.

→ Low-Data Mode: toggle to disable all images — show text-only descriptions and prices.

→ Quick-Reply Chat Templates: reduce data usage for low-bandwidth users.

Notification Edge Cases

Alert Type	Trigger	Message
Outbid Alert	Higher bid placed on your item	Someone plugged a higher bid! 10 mins left.
Job Accepted	Seeker taps Accept on your gig bid	Your bid was accepted. Open My Plugs for the Swap Code.
New Gig Nearby	Job posted in your unlocked suburb	New Job in [Suburb]: [Title]. Be the first to bid!
Neighborhood Warning	Points drop below next unlock threshold	Grace Period Active! 48h to recover or lose [Suburb A].
Territory Revoked	48h grace period expired	Access Lost. Earn points to unlock [Suburb] again.

Inactivity Warning	80 days inactive	Ubuntu Alert: points decay in 10 days if you don't log in.
Handshake Reminder	Accepted deal 48h without code	Met up yet? Enter the Swap Code to finalise the deal.
Dispute Filed	Either party hits Dispute	Account frozen until Community Mod reviews your case.
Jan 30th Reveal	Jan 30 + gifted >= 50 pts	The Big Plug is here! +100 Points + Golden Eye unlocked.

SECTION 8 — MVP SPEC & BUILD NOTES

Infrastructure, monetization, and future features

Infrastructure (Lean Stack)

Platform	Progressive Web App (PWA) — works in any mobile browser; no App Store fees
Database	Stores: Ubuntu points ledger, transaction history, suburb lists, swap codes, banned IDs
Storage	Compressed images (<200kb). Auto-purge at 30 days post-deal. Disputes keep images indefinitely.
Maps	NO Google Maps API. Hierarchical text list: Bulawayo > Zone > Suburb.
Payments	P2P only. No escrow. Platform holds no money.
Languages	English, IsiNdebele, ChiShona — toggle on all screens.
Daily Backup	Text-only backup of Ubuntu Point ledger (protect trust scores from server crashes).

Bulawayo Suburb List (Starter — Admin Can Add More)

→ North: Burnside, Hillside, Matsheumhlope

→ South: Paddonhurst, Selborne Park, Magwegwe

→ East: Ascot, Sunningdale, Pumula

→ West: Cowdray Park, Emganwini, Nkulumane

→ Central: Makokoba, City Centre, Iminyela

Future Features (Post-MVP)

→ Vacation Mode: user toggles 'I'm Away' — all active gigs/items hidden from discovery; prevents no-show deductions.

→ Hustle Resume: PDF export of a user's Job/Service history + Ubuntu score — usable as a character reference for young job seekers.

→ Neighborhood Hero badge: highest Ubuntu score per suburb gets a special 'Hero of [Suburb]' badge on the map.

→ Neighborhood Heat Map: toggle to see which suburb has the most active $1 auctions (Green = Busy, Blue = Quiet).

→ Community Mod Audit: Admin reviews top 3 Jury members every 6 months for bias.

→ Public Blacklist Wall: last 10 banned users shown (initials only) on a transparency screen.

→ Bulk Re-list: one-tap to re-list a 24h auction that ended with zero bids.

→ Stolen Property Database: serial number cross-check across all flagged listings.

→ Mod Bounty: Mods who correctly identify stolen items earn +2 Ubuntu Bonus.

Attached Files

Include both files when briefing your developer or Antigravity:

1. the-plug.html — Interactive prototype showing all screens, navigation, and UI patterns.
2. This document — Full logic spec, Ubuntu economy rules, screen map, and backend requirements.

Together these two files give a complete picture of what needs to be built.

THE PLUG — Blueprint v1.0 · Bulawayo, Zimbabwe

Built with Ubuntu spirit. Designed for the community.
